- Stream Splitter
- Digital pan & zoom
- Auto-switch frame size
- Effects plug-ins
- Video Enhancement
- Auto power-saving for notebook users
- Certified for Windows Vista

Product Details:

Streaming video choices

Most people use their webcam as their primary source when broadcasting video, but with Virtual Driver technology you can choose your video source! Use your webcam or pick a photo or video on your hard drive and share it through your webcam. Yep, video from your hard drive can be broadcast using your IM and appear as though it's coming from your webcam. It's the ideal tool to share photos and videos in real-time.

ArcSoft Magic-i 3 Webcam Virtual Driver has passed Microsoft WHQL certification.

Fun visual effects

Add video effects, such as Distort, Mirror, and Fun Frame, to give your webcam video more style and flare. Whether you add a beautiful frame around your video or simply want to create a few extra laughs with funny distortions, Magic-i will enhance your online chat experience. You can also enhance ArcSoft WebCam Companion's previewing and capturing functions.

Video enhancement

It doesn't have to be a painful process to make your webcam video look great even if there is too much or too little light. Brilliant video is only a click away with an enhancement tool that adjusts brightness and contrast with real-time previews. You can choose the automatic setting or manually adjust the settings to make it look exactly as you like.

Face tracking

Even though there are no moving parts to adjust the camera, face tracking expands the camera's perspective from roughly 10 degrees to about 50 degrees. What does that mean? It means the camera is able to recognize and track a human face as it moves around. Essentially, you won't accidentally drift off-screen as you move around in your chair - face tracking keeps you in the picture!

Share video with other applications

Using two messenger applications at the same time? Stream Splitter allows your webcam video to be shared so that it can be used in both applications at the same time. You can also share the video stream with ArcSoft WebCam Companion™ for even more possibilities.

Digital zoom

Digital pan & zoom of your webcam video (or other source) means you can zoom in for close ups or zoom out to show the full frame. A live preview gives you complete control of what your video looks like.

Custom avatar

Personalize your video chat experience even further with an avatar that acts as your "virtual self," tracking your facial expressions while you chat. Use one of the built-in avatars or create your own from any photo on your hard drive.

Video effects plug-ins

Want even more effects? Plug-ins are available for download from the ArcSoft web site.

Multiple media sharing

Share your photos and videos right through the chat windows. No more attaching files, stream them over on the spot!

Microsoft® Office PowerPoint® file sharing

Besides sharing your photos and videos, PowerPoint presentation can now be viewed through your chat window!

Auto Power-Saving

Designed specifically for notebook computers, even when the application is closed and minimized to the system tray, the program will release the physical webcam after five seconds in order to save power.
