

ArcSoft MediaConverter™ 2.5 is a fast, easy-to-use application that converts photo, video, and music files into formats optimized for use on your portable device. With its simple 2-step process, you can convert media with unmatched speed and quality to play in your MP4 player, iPod, PSP or other portable media players. To save more time, you can even convert multiple files in batches regardless of their original formats, and for driverless installation, Microsoft Media Transfer Protocol (MTP)* is supported.

ArcSoft Media Converter™ 2.5

The fastest most flexible conversions for your portable devices

www.arcsoft.com

Convert Between the Most Popular Formats - Including DVD and VOB

Compatibility is assured as AVI, DivX, MOV, MP4, RM, WMV, OGG, AAC, ODM, MP3, RA, JPG, TIF, and many other popular formats are supported. Convert DVDs - either selected chapters, or the whole disc. Select from available languages and subtitles for your converted files. Convert VOB files and select which streams to convert from the list of multiple audio streams.

No Worries When Converting Copyrighted Materials

Windows Media 10 Digital Rights Management (DRM) support lets you transfer copyright-protected music or video to your portable device without wondering if the media will play properly.

Enhanced Compatibility

Microsoft Media Transfer Protocol (MTP)* support means no additional drivers are needed. Other benefits include AutoSync with Windows Media Player 10.

Bypass Device-native Formats

You save time by converting files only if your target device cannot read the original file type. For example, if you have a MP4 file and your iPod can play back that file, the application is smart enough to transfer the file without converting it. What's more, you can transfer converted files to your iPod directly - without having to go through iTunes.

Preview Before You Convert - In Full Screen

Never waste another moment converting the wrong file. Now you can preview the files selected to make sure you have the right files. You can even preview your files in full screen mode.

Extract Audio

You can rip audio from a video file and save it as a separate MP3 file.

Upload to YouTube

Upload your converted files to your existing YouTube account. Simply follow the onscreen instructions to log in to your account and allow MediaConverter to automatically upload files. Then share your videos with the world!

RealMedia Support

Import files in RealMedia (.RM, .RMVB, .RA) format and export them to play in your favorite media player.

Use Your Favorite Media Players

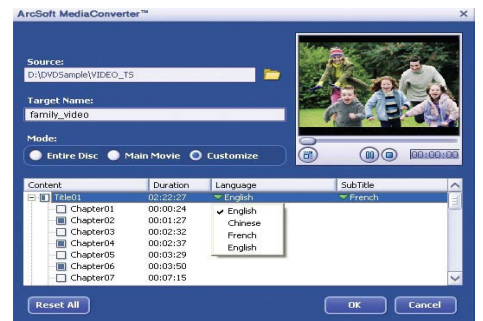

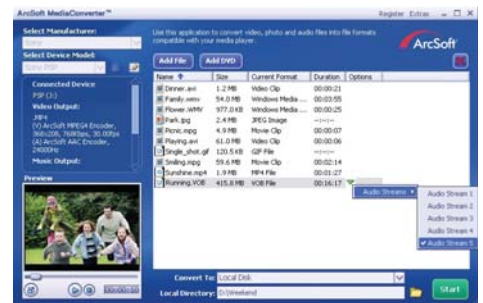

Many portable devices, such as the Sony PSP, Apple iPod and SanDisk Sansa e200, are supported (with many more coming soon) so you can take all your favorite videos with you no matter which kind of media player you have.

Set CPU Priority

Whether you want to work on other things while converting files or dedicate your computer to a fast conversion, you can decide how much computer power you want to use.

Available in 13 Languages

Choose from English, French, Italian, German, Spanish, Portuguese, Swedish, Dutch, Japanese, Korean, Russian, Chinese Simplified and Chinese Traditional.

* Note: No drivers are required for USB 2.0 connected MTP-compatible devices running with Windows XP and Windows Media Player 10.

Minimum System Requirements

- Windows 2000/XP/Vista
- Pentium III 800 MHz or equivalent
- 50 MB free hard drive space for program installation
- 16-bit color display at 800x600 or above (32 MB video memory with DirectX 3D support recommended)
- DirectX 9.0c or above
- Windows Media Player 9 or above
- QuickTime 6.5 or above
- RealPlayer 8 or above
