ArcSoft photoBase™ DELUXE

Video, photo, and music archiving and sharing have steadily increased within the general consumer market. Digital still and video cameras — and the MP3 explosion — have set forth the need for an easy-to-use multimedia management application. **ArcSoft PhotoBase™ Deluxe 4.5** is the answer. As the perfect all-in-one companion for any multimedia hardware bundle, it offers complete digital media management, archiving, and presentation capabilities to users of all levels.

COMPLETE MULTIMEDIA SOLUTION

ArcSoft PhotoBase Deluxe 4.5 works perfectly with your hardware, whether your customers need to capture images, video, or audio, edit photos, or backup their files to disc. The program rounds out your product offering, resulting in fewer returns and effectively increasing the overall user experience.

FAST FILE BROWSING

Multiple display options make it easy for users to find and preview their multimedia collections. Videos and audio files can be previewed with basic playback controls.

MEDIA ARCHIVING

With megapixel images and digital videos yielding large file sizes, users need a convenient way to archive older media. With a built-in burning engine, ArcSoft PhotoBase Deluxe 4.5 offers simple and effective CD archival options.

SLIDE SHOW PRESENTATIONS

Fun, custom slide shows can be created using video clips and music in addition to still images. Neat transition effects can be included to enhance viewing, and slide times can automatically coincide with the added soundtrack.

ARCISOFT RENAMER™

A convenient preview window offers fast and easy navigation of files within a specific location. Still images can be rotated and all files can be renamed in no time.

BATCH FILE PROCESSING

In just a few simple steps, your customers can either rename, resize, or change the format of countless photos all at once. Perfect for taking high-resolution images and making them more manageable and ideal for sharing over the Web.

CATALOG PRINTING

Your customers aren't limited to printing single photos. They can also print multiple images per page, as well as contact sheets with text descriptions. Catalogs are assembled and shared with ease.

PHOTO EDITING

A complete image editor comes built right into the program. Photos are cropped, resized, rotated, and enhanced with just a few clicks. Red-eye is removed in a snap and text added to any picture in no time.

TEXT ANNOTATION

ArcSoft PhotoBase Deluxe 4.5 offers three distinct and custom text fields for adding annotation, ensuring all file details are readily available at any time. Great for classifying items for a catalog.

EMAIL MADE EASY

The program offers automatic resize options when sending photos via email. Your customers never have to worry about their friends and family waiting for their mail to download, only to open inconveniently large photos.

SYSTEM REQUIREMENTS

Windows 98SE/Me/2000/XP • Pentium II-based processor or equivalent • 150 MB free hard disk space • 64 MB RAM (128 MB highly recommended) • 16-bit color display at 800 x 600
