

For Windows and Mac

Turns your regular camera lens into a wide angle monster!

Like magic, ArcSoft Panorama Maker® turns any series of overlapping photos into a gorgeous panoramic image in just seconds. The program does most of the work for you by automatically selecting an entire group of pictures with one click, automatically organizing the photos into the proper order, then seamlessly stitching the photos into a panoramic masterpiece that you can print, share or post to the web. Create horizontal, vertical and 360° panorama pictures all within this one amazing program.

# ArcSoft Panorama Maker® 4

Seamlessly stitches photos into beautiful works of art

### Does the Job for You

The program's step-by-step approach lets you create awesome-looking panoramic images without any digital imaging expertise. If you can operate a camera... you can create spectacular panoramic images.

### Auto-Selects Photos

Finding and selecting the right photos could not be any easier. Click just one thumbnail and the program instantly finds and selects the others that go with it. The built-in folder tree and a range of thumbnail sizes make browsing a cinch.

### Supports RAW

In addition to stitching JPG and TIF files, the program works with RAW image files by Nikon, Canon, and Adobe (DNG).

### Includes Helpful Advice

Whether you're a beginner or a seasoned professional, shooting photos for panoramas can be tricky business. To make things easier, the program includes a tutorial entitled "How to Shoot Photos for Panoramas" along with a printable checklist that you can take with you when you go out to shoot.

### Offers 3 Stitching Modes

Vertical Panorama - great for getting a full picture of soaring skyscrapers, towering trees and cascading waterfalls

Horizontal Panorama - designed for capturing vast landscapes, city skylines and effectively converting your standard lens to a wide-angle

360° Panorama - whether you're surrounded by a range of mountains, a forest of trees or the fence in your own backyard, stitching in 360° puts you right back in the middle of it all.

### Auto-Arranges Photos

The program analyzes the selected group of photos and puts them in the correct order for stitching. All you need to do is confirm the order and click "Stitch".

### Finishes Fast and Flawless

It takes just seconds to seamlessly stitch your panorama. The final result looks so incredible... you won't believe your eyes.

### Lets You Fine-Tune

After the panorama is stitched, you can manually crop off any jagged edges and straighten the photo so the horizon line looks level.

### Previews Full Screen

The full screen preview mode gives you an elegant, uncluttered view of the stitched panorama. The 360° view mode lets you glide back and forth throughout the panorama - as if you're standing in the middle of the scene.

### Outputs to Multiple Formats

Not only can you save your panoramas as image files (JPG, TIF, BMP, TGA), but the program also lets you turn them into dynamic, interactive files (QuickTime VR and HTML) - ideal for websites and other types of digital presentation.

### Supports Banner Printing

Once your panorama masterpiece is stitched and saved, it's time to print and hang it on the wall. The print preview screen supports borderless banner paper and also lets you print across multiple sheets of paper.

3 Stitching Modes  
Vertical, Horizontal, 360°

#### System requirements:

- Windows 98SE, ME, 2K, XP
- Mac OS 10.3 or higher
- Pentium III 550 or equivalent
- Power PC G4 or equivalent (MacIntel supported)
- 10 MB HD space
- 12 MB HD space
- 128 MB RAM (256 recommended)
- 256 MB RAM
