Key Features

- Creates horizontal, vertical, and 360°, and tile (4x4) panorama pictures
- Automatically selects a whole group of photos with one click
- Automatically orders and stitches pictures seamlessly
- Allows manual alignment of the stitching points and manual adjustment of the stitching path
- Adds frame, title, and copyright information to the stitched picture for printing and sharing
- Provides fine-tuned control for adjusting brightness and contrast and for cropping and straightening the stitched picture
- Includes extensive RAW format support
- Supports unlimited photo counts for stitching horizontal, vertical, and 360° panorama pictures
- Supports banner paper and multi-sheet printing
- Available for both PC and Mac (including MacIntel)

Product Details

Starts the Job for You...

The program's step-by-step approach lets you create awesome-looking panoramic images without any digital imaging expertise. If you can operate a camera... you can create spectacular panoramic images.

...Then Lets You Adjust the Results

We understand that as an experienced photographer, you know your subjects best. That's why the program provides ample opportunity for adjustment and editing, including controls for brightness, contrast, cropping, straightening, adjusting stitching points, and blending stitching paths.

Auto-Selects Photos

Finding and selecting the right photos could not be any easier. Click just one thumbnail and the program instantly finds and selects the others that go with it. The built-in folder tree and a range of thumbnail sizes make browsing a cinch.

Supports RAW

In addition to stitching JPG and TIF files, the program provides support for an extensive set of RAW image files, including formats from Adobe (DNG), Canon, Epson, Kodak, Mamiya, Nikon, Olympus, Panasonic, Pentax, Sigma, and Sony.

Gives You Advice

The program includes a tutorial entitled "How to Shoot Photos for Panoramas" along with a printable checklist that you can take with you when you go out to shoot.

Offers 4 Stitching Modes

Vertical Stitching - great for getting a full picture of soaring skyscrapers, towering trees, and cascading waterfalls

Horizontal Stitching - designed for capturing vast landscapes, city skylines, and effectively converting your standard lens to a wide-angle

360° Panorama - whether you're surrounded by a range of mountains, a forest of trees, or the fence in your own backyard, stitching in 360° puts you right back in the middle of it all

Tile Panorama - can't decide between vertical and horizontal? Stitch together a 4x4 square of photos

Auto-Arranges Photos

The program analyzes the selected group of photos and puts them in the correct order for stitching. All you need to do is confirm the order and click "Stitch."

Finishes Fast and Flawless

It takes just seconds to seamlessly stitch your panorama. The final result looks so incredible... you won't believe your eyes.

Previews Full Screen

The full screen preview mode gives you an elegant, uncluttered view of the stitched panorama. The 360 QT VR view mode lets you glide back and forth throughout the panorama - as if you're standing in the middle of the scene.

Outputs to Multiple Formats, with Frames

Not only can you save your panoramas as image files (JPG, TIF, BMP, TGA), but the program also lets you turn them into dynamic, interactive files (QuickTime, HTML) - ideal for websites and other types of digital presentation. Add frame, title, and copyright information to make your output more formal.

Supports Banner Printing

Once your panorama masterpiece is stitched and saved, it's time to print and hang it on the wall. The print preview screen supports borderless banner paper and also lets you print across multiple sheets of paper.
