

# ArcSoft WebCam Companion™ 3

Do more with your webcam

ArcSoft WebCam Companion™ 3 offers a broad range of applications designed and optimized for webcam use, whether utilized to record video or to take a special photo, ArcSoft WebCam Companion 3 lets you get the most out of any webcam. It brings together ArcSoft's latest Webcam applications into one great user experience. Starting from the Launch Pad, you can access any of ArcSoft's great new Webcam applications including: Capture, Edit, Masque, Fun Frame, Monitor, and more.

- Record video clips quickly and easily
- Smart real time video enhancement by Noise Reduction and Dynamic Lighting technologies
- Capture photos from your webcam with window and full screen modes
- New Masque feature to morph your face into a character's face
- New Fun Frame feature to automatically capture photos with Pose Detection technology
- View and manage clips in handy thumbnails and folders
- Preview editing changes in images and videos before saving and then print them
- Tools to enhance, brighten, adjust contrast and blur
- Resize, crop, and save edited results to different image formats
- Intelligent surveillance with in-house face and motion detection technology

## Photo and Video Capturing

You don't need a high-end digital video camera to make fun movies, and share them with friends and family. WebCam Companion makes capturing and editing video from your webcam fast and fun. Also preview photos and videos in full screen mode, add animation effects to photos; and upload to YouTube.

## Pose Detection

With the Photo Booth application, automatically snap photos, adjust the pose detection sensitivity, select a variety of layouts and templates for printing, and select frame templates by category.

## Masque Your Photos

Have fun and get creative with a morphing tool to integrate your face into another character, and then snap a photo. Preview your pictures with picture in picture, fit in view, portrait view, zoom in/out, and flip tools. Create a template by loading any pictures and then edit them with a variety of tools.

## Editing Snapshots

Webcams are used primarily to stream video, but WebCam Companion lets you take snapshots with a variety of editing commands: adjust lighting with easy-to-use brightness and contrast controls, even sharpness to help compensate for movements; flip photos around to create mirror images, undo/redo changes with a single click; resize images by pixel resolution or by percentage, and now you can even crop your photos while you edit them.

## Album Managing

As time goes by, your video and image file collections may grow large and become unmanageable; finding the file you want then becomes a difficult task. WebCam Companion has a convenient album-managing function that allows you to organize your files as soon as you create them. Captured images and video clips are organized into albums so that you can quickly find the right one.

## Intelligent Video Surveillance

It incorporates efficient in-house face detection and motion detection technology to detect a face or object moving in front of the webcam and can report this discovery with captured images to remote location by email or FTP. It also lets you set your recording to begin as soon as abnormal event is detected by your webcam. Furthermore, it gives a convenient way to browse and review recorded videos by event.
